

Progressive policies discourage destructive consumption and reward good consumer choices

Carbon Fee and Dividend does precisely that for carbon pollution

CARBON FEE AND DIVIDEND: put an incrementally increasing fee on carbon pollution and return 100% of the dividends to households on an equitable basis.

We have data that clearly shows, the bottom 2/3 of Canadians would come out even or ahead in terms of how much carbon fees they would pay in comparison to the carbon dividend check they would receive from the government.

It is quite simple, the less carbon you consume, the greater your return.
